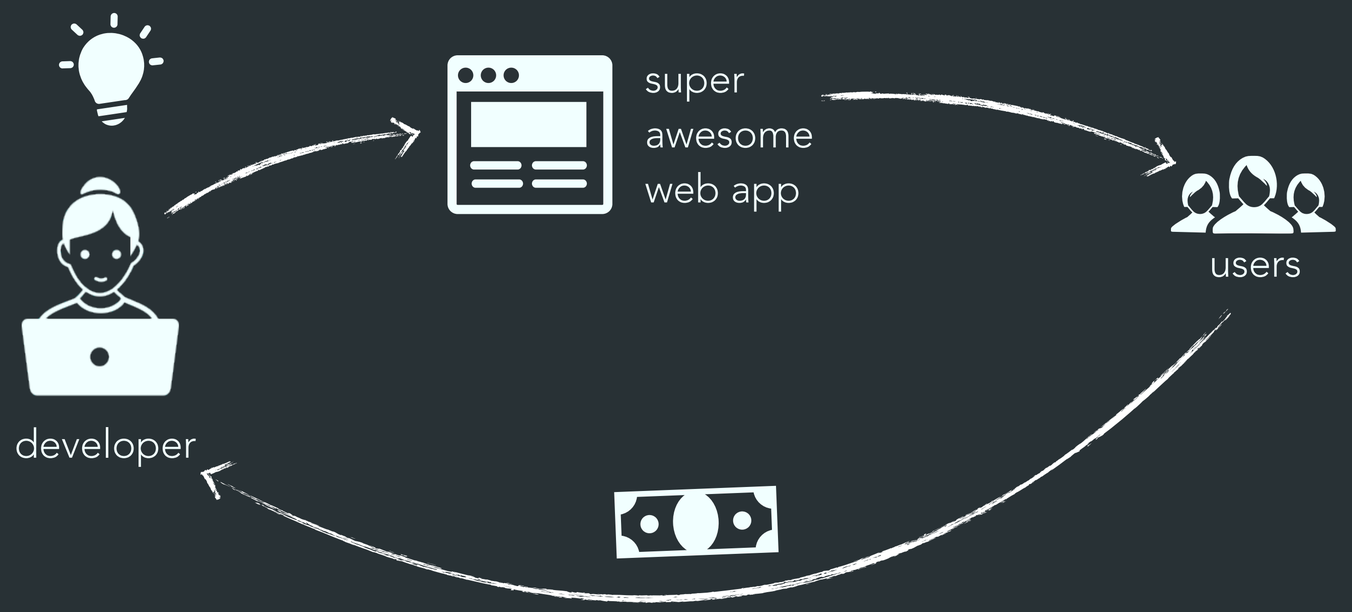
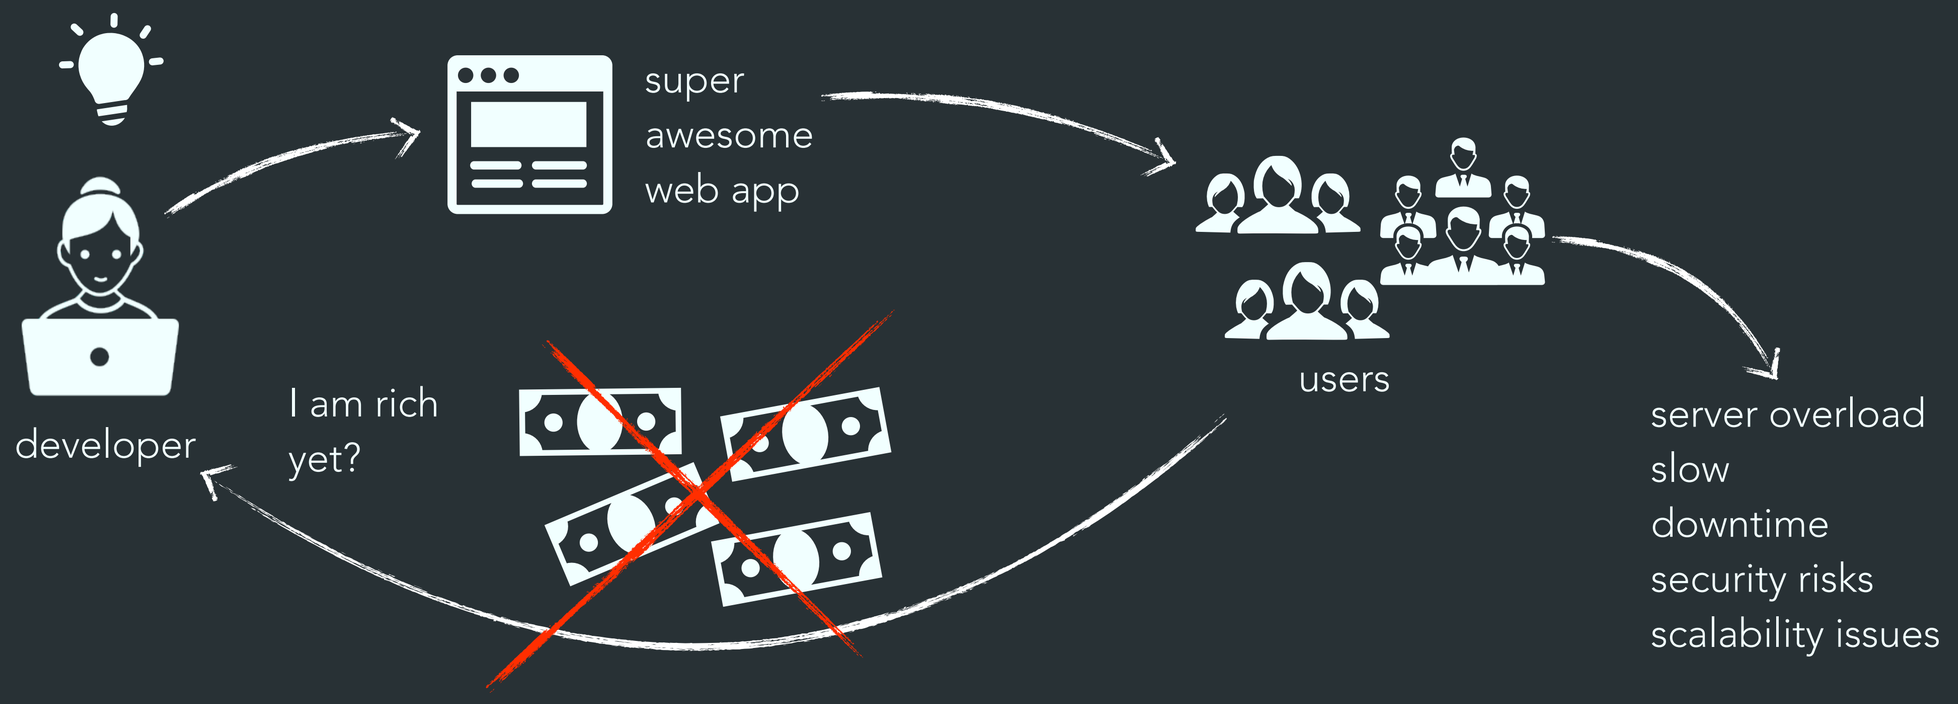
kokchun giang

an introduction to cloud computing and **microsoft azure**

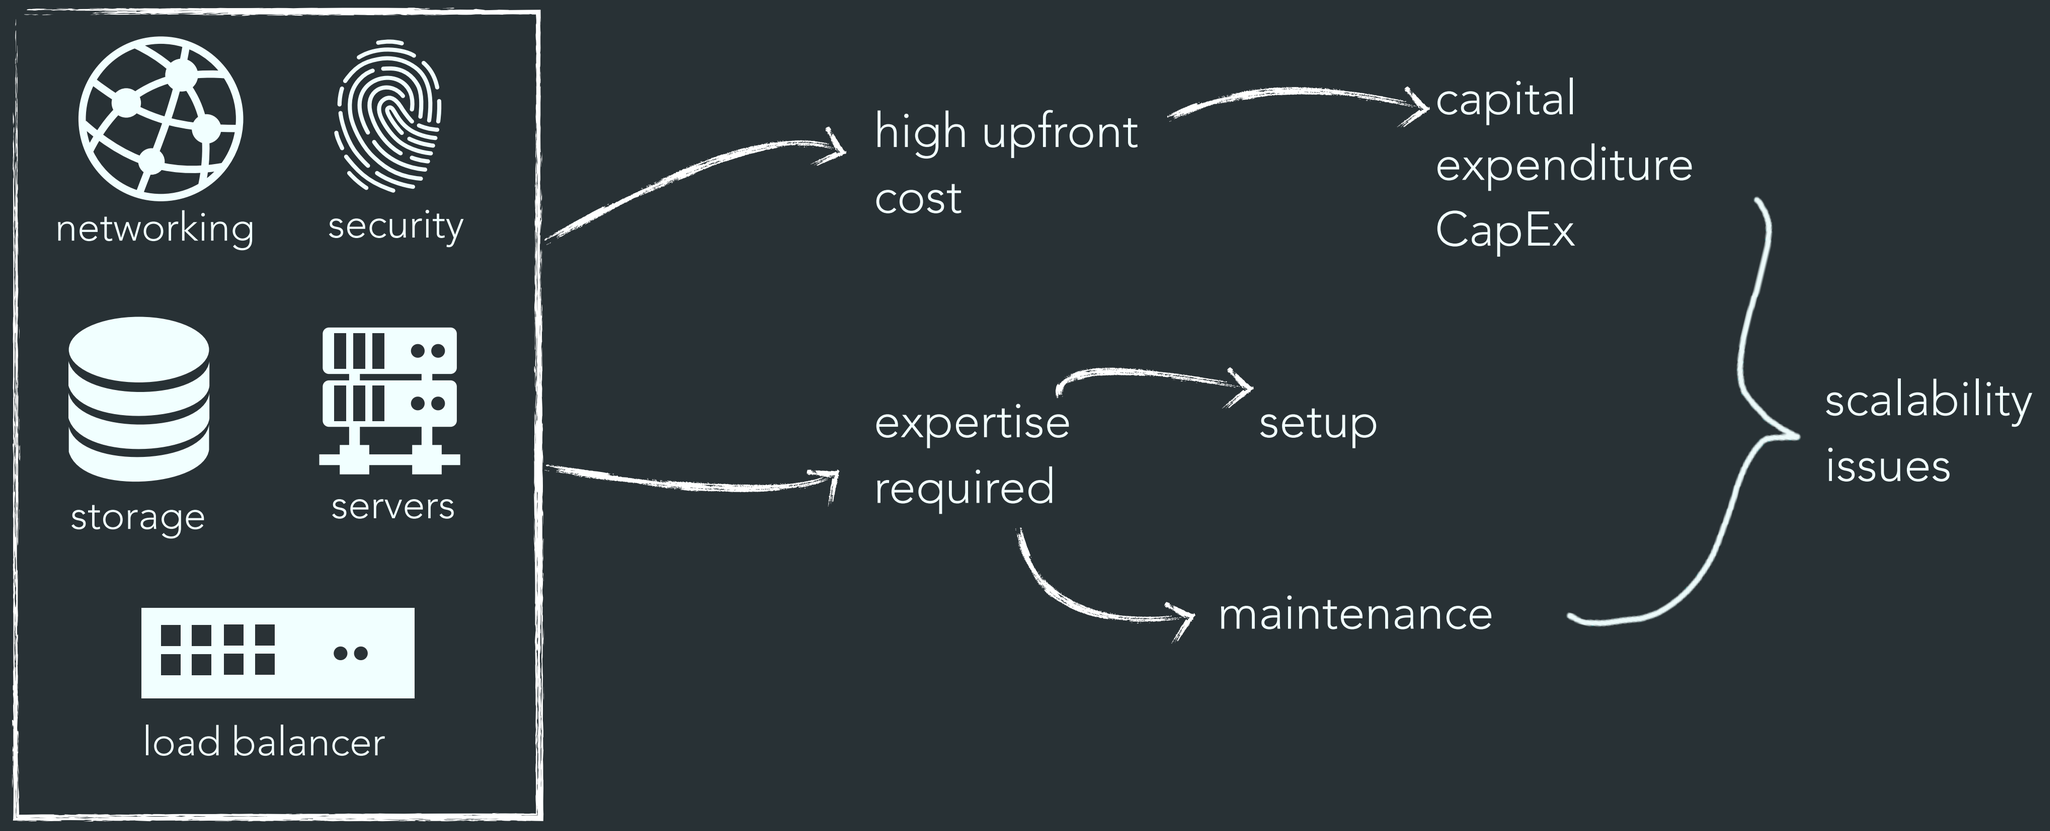
a developer creates a **web app** and earns money



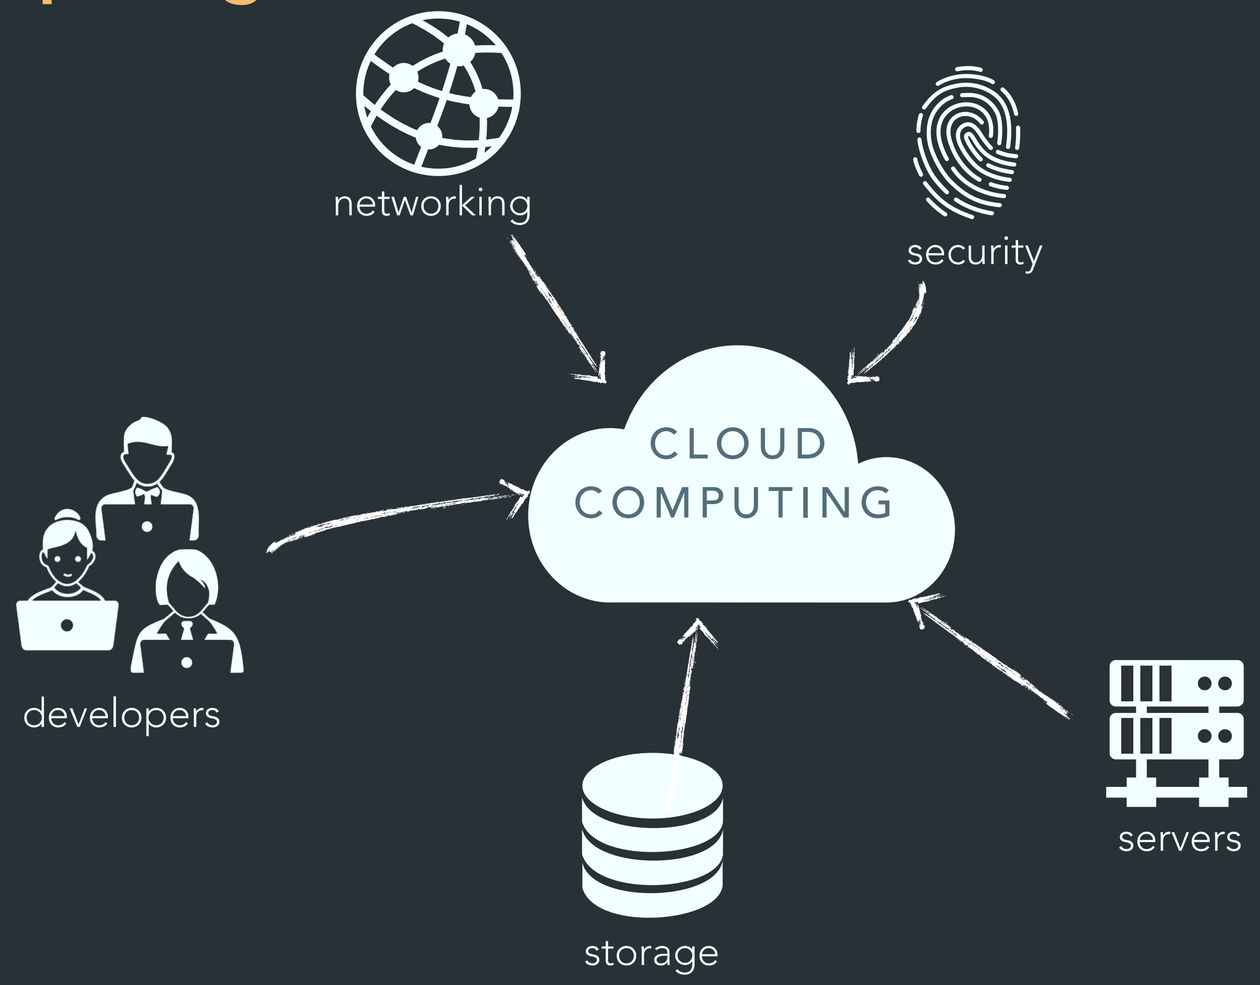
the app is becoming popular and generates **traffic**

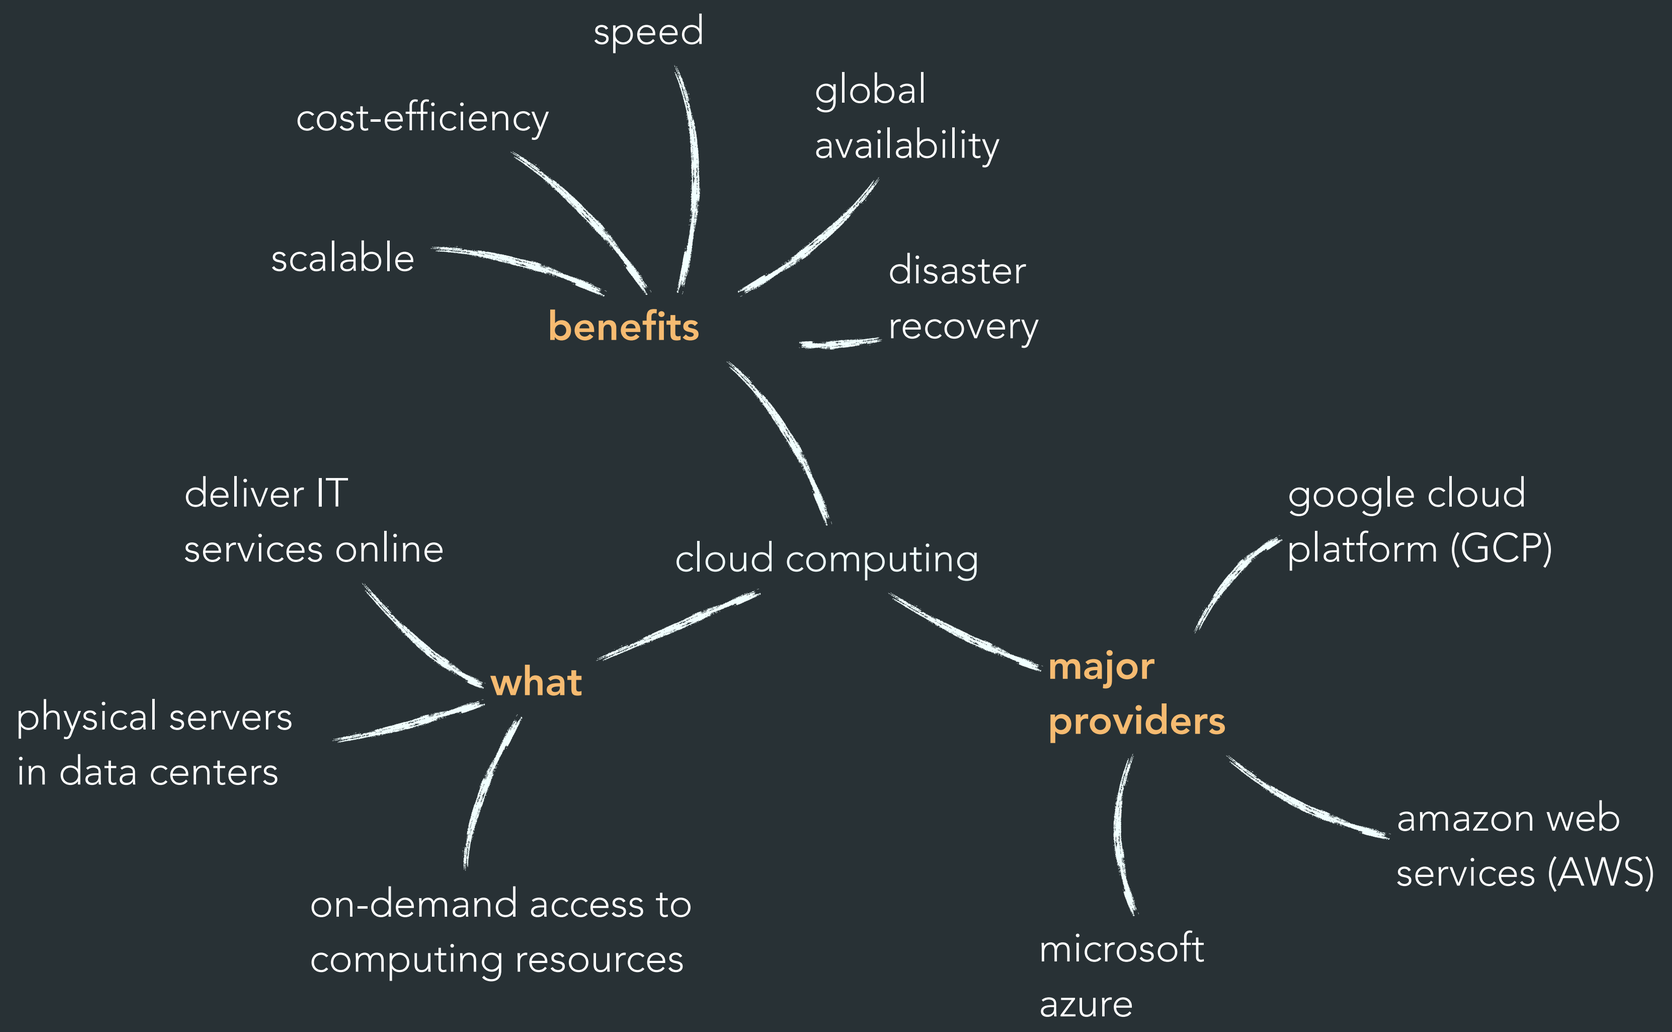


we need this **infrastructure** as a bare minimum



these services and many more are delivered by **cloud computing**





speed
cost-efficiency
global availability
scalable
disaster recovery
benefits
deliver IT services online
cloud computing
google cloud platform (GCP)
what
major providers
physical servers in data centers
amazon web services (AWS)
on-demand access to computing resources
microsoft azure
